

**Dear LLTC & Central Beds Highways**

**Pre-Pandemic, it was proposed by the council and supported by Highways that experimental pedestrian controlled crossings would be strategically place around the centre of Leighton Buzzard to enable a smoother traffic flow and reduce elements of road rage/conflict that were witnessed.**

**In addition, this proposal may also contribute to lower levels of CO2 from standing traffic that is seen everyday from the gridlock that occurs around our town.**

**With the increasing number of dwellings and businesses rising almost daily across the area, will this matter be discussed again and introduced?**

**Our previous correspondence on the matter was relevant to that time in 2019, and this has become even more acute now that vehicle numbers in and around the town have multiplied and will continue to do so.**

**Your urgent attention in this matter would be most appreciated.**

**Residents of Leighton Buzzard Town**
